Civitas	Feb. 2015
Apocalipsis game	Aug. 2014
DiveApp	May. 2014
Smart Beaches	Nov. 2013

JOB EXPERIENCE

Bynder S.L. Barcelona 2019-Now
Mobile Developer #Android Studio #kotlin

Joined to revitalise and impact on the mobile team at Bynder. Took a legacy code and refactored an old java-styled into a modern clean architecture kotlin codebase in less tan 6 months.
Split the app into different modules that can work independently to reduce overall coupling within the different app features.
We as a team provided input on what new features and improvements the app could have, from a technical point of view as well as from a customer point of view.

Ubisoft Barcelona Mobile Barcelona 2017-2018
Mobile Platform Engineer #unity3D #c-sharp #java #obj-c

I primarly work as a bridge between the games and their correspondent platforms. I create and improve tools that let the different teams focus on the game development. In essence I deal with several types of SDK like tracking, advertising or with native features unique to each platform, always keeping in mind on easing the process to all my coleagues.

Softonic International Barcelona 2016-2017
Android UX Engineer #android studio #axure #java #kotlin

After my first year I moved to the UX team, switching perspective from a feature-centered development to a more strategic one. Working on a lean startup style (build-measure-learn).
Developing prototypes and proof-of-concepts alongside different teams (UX, product, etc..)
We created complete apps from scratch. Participate in internal training sessions as trainer for technical profiles as well as non technical.

Android Engineer #android studio #java 2015-2016

In Softonic my job is to help with an app that was being developed at that time.
Learning from past experiences and develop new features in an agile environment.
Working with a multi-disciplinary team as an autonomous unit in order to deliver fast and efficiently was the key factor.
We worked with several 3rd party SDK for tracking, advertising, gamification, etc..

Technodac S.C.P. Tarragona 2010-2015
Android Developer #eclipse #android studio #java

Main android developer, assuming more and more responsibility in projects and to undertake UX tasks such as wireframes or prototypes. Responsible for high level project definition, choosing specific technology.
Working closely with the UI and UX designer. Self-demanding worker and always with the best quality as the only acceptable outcome.
